

THAMILINI GOBALAKRISHNAN

FULL STACK SOFTWARE ENGINEER INTERN

Colombo, Sri Lanka | +94 75 055 3425 | thamilgobalakrishnan@gmail.com | github.com/tfamil | linkedin.com/in/gthamil/

PROFESSIONAL SUMMARY

BSc (Hons) Computer Science student with full-stack internship and project experience across mobile, backend APIs, and responsive web development. Contributed to SeatSnaps at RISPIT Lanka across Flutter mobile and web organizer workflows. Built Node.js/TypeScript services with PostgreSQL and automated tests, Kotlin Android features with Room/Firebase/sensors, Flutter game logic, and Python API integrations. Strong in debugging, testing, data modelling, REST APIs, Git, and maintainable code.

SOFTWARE ENGINEERING EXPERIENCE

Full Stack Developer Intern - RISP IT Lanka | SeatSnaps Organizer Platform | 2026

- Contributed to SeatSnaps' Flutter organizer app and web-based organizer platform, supporting end-to-end event operations.
- Implemented API-backed login/session persistence, role and event flows, attendee search/manual check-in, QR scanning with camera permissions, ticket booking, and check-in/result screens.
- Integrated REST API data across mobile/web organizer workflows; used Git/GitHub and updated setup/README documentation for review and handoff.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Kotlin, Dart, SQL, HTML, CSS

Backend & APIs: Node.js, Express, REST APIs, Prisma ORM, Zod validation, JSON, third-party API integration

Data & Cloud: PostgreSQL, Room/SQLite, Firebase Authentication, Cloud Firestore, local persistence

Mobile & Frontend: Android SDK, Flutter, responsive HTML/CSS/JavaScript, Google Maps SDK

Testing & Engineering: Jest, JUnit, Flutter test, unit testing, mocking, error handling, Git/GitHub, VS Code, Android Studio

Engineering Practices: SDLC fundamentals, debugging, unit/UI testing, Flutter test, Input validation, Error handling, Git/GitHub, documentation, secure-coding awareness

SELECTED SOFTWARE PROJECTS

SeatSnaps Event Organizer App by RISPIT Lanka - Contributor | *Flutter, Dart, REST API, QR Scanning, GitHub Collaboration*

- Contributed to a shared Flutter organizer app covering API-backed login/session handling, role/event flows, attendee search and manual check-in, QR scanner/camera permissions, ticket booking, and result/success screens.
- Worked within an existing codebase and prepared setup/README updates for contribution review, demonstrating collaboration, communication, and fast framework learning.

Todo / Shopping List / Water Tracker REST API | *TypeScript, Node.js, Express, PostgreSQL, Prisma, Zod, Jest*

- Designed a REST API with separate task, shopping-list, and water-tracking modules, including CRUD endpoints, filtering/pagination, request validation, health checks, and centralized JSON error handling.
- Applied a Route -> Service -> Repository architecture with dependency-injected repositories and transaction-wrapped writes; modelled PostgreSQL data with Prisma enums, indexes, UUID identifiers, and date handling.
- Wrote mocked service-layer unit tests with Jest/ts-jest; configured coverage reporting and a 90% project threshold.

PulsePath/ GymMonster Fitness Mobile Apps | *Kotlin, Android SDK, Room, Firebase, Google Maps, Sensors, WorkManager*

- Built a native Android fitness application using ViewModel/LiveData and a repository layer, with Room persistence plus Firebase Authentication and Firestore workout synchronization.
- Integrated step sensing, GPS/Fused Location tracking, Google Maps route polylines and distance calculation, calorie utilities, background reminders, and coroutine-based asynchronous operations.
- Added JUnit unit tests for workout/calorie logic and Espresso instrumentation coverage for authentication UI flows.

Connect Four - Human vs AI Mobile Game | *Flutter, Dart, SharedPreferences, Unit Testing*

- Implemented a 7x6 human-vs-AI Connect Four app with pure board logic for legal moves, disc placement, horizontal/vertical/diagonal wins, draws, and undo.
- Created multiple AI difficulty strategies including immediate win/block logic and heuristic board scoring; persisted win/loss/draw statistics with SharedPreferences.
- Structured reusable screens/widgets and a dedicated logic layer with unit tests covering board operations and AI behaviour.

MyWeather Desktop Application | *Python, Tkinter, OpenWeather API, JSON, Pillow*

- Developed a Python CLI administration tool and Tkinter GUI that manage saved locations and retrieve live weather data through OpenWeather geocoding/weather APIs.
- Parsed JSON responses and presented temperature, humidity, wind direction/speed, sunrise/sunset and weather icons, with local location persistence and per-session response caching.

Personal Portfolio Website | *HTML5, CSS3, JavaScript, GitHub Pages*

- Built a responsive single-page portfolio with custom CSS layouts, interactive project modals, scroll progress/reveal behaviour, reduced-motion support, and configuration-driven content.
- Prepared the site for static GitHub Pages deployment with accessible navigation, downloadable CV integration, and project-focused content.

TaskPulse Collaborative Task Management Platform | *React, Vite, JavaScript, Context API, CSS, Drag & Drop*

- Contributed to a four-person React/Vite Kanban-style task management application with board switching, drag-and-drop task organization, global search, calendar-based task indicators, shared-member roles, and light/dark themes.
- Worked with reusable React components, Context-based state management, and structured mock task/board/member data designed for straightforward migration to REST API-backed services.
- Collaborated through GitHub feature branches and pull requests, integrating team contributions, resolving component and styling conflicts, and maintaining a shared frontend codebase.

Daily Planner – Progressive Mobile Web App (PWA) | *HTML5, CSS3, JavaScript, Browser Storage, Responsive Design*

- Built a lightweight mobile-first daily planner combining to-do management, shopping lists, and an interactive eight-glass water-intake tracker in a single-page browser application.
- Implemented client-side persistence and date-aware rollover logic to retain unfinished items, clear completed entries, and reset hydration progress for each new day.
- Designed responsive custom HTML/CSS interfaces and JavaScript interactions for convenient phone-based use without requiring a backend server, user account, or external database.

EDUCATION

BSc (Hons) Computer Science | 2025 - Present | Expected 2028

NSBM Green University | University of Plymouth (UK) pathway

GCE Advanced Level - Physical Science Stream | J/Vembadi Girls High School | 2021 - 2023

ADDITIONAL EXPERIENCE (NON-SOFTWARE ENGINEERING)

Event Coordinator (Volunteer) - bugbusters Community / WIT Community | Dec 2025 - Present

- Support event planning, community engagement, coordination, and communication with team members.

Digital Marketing Intern - Yarl IT Hub | Apr 2024 - Dec 2024

- Supported website content updates, research, campaign activities, reporting, and performance-related information.

Junior Tech Operations - teamW2S | 2024 - 2025

- Supported remote operational tasks and cross-team coordination in a technology-focused environment.

Website Content Administrator - walkwithsrilanka.com | 2022 - 2024

- Managed website and social content updates, curation, and moderation across digital platforms.
